                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Anote—"Vector: pr773D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from mammary gland tissue from a lactating female, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was prepared to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pr773 vector. Library is normalized. Library

The CDNAs were ligated purified by ethanol-precipitation. The CDNAs were ligated to Lone-linker Li-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the CDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The CDNAs were digested with Sal1 and NotI enzymes and cloned into Sal1/NotI site of pSPORTI plasmid vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NotI; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA). ```
3']; double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT/73 vector. RNA provided by Dr. Bertrand Jordan. Library went through two rounds of normalization, and was constructed by Bento Soares and M.Fatima Bonaldo."

OTHER INFORMATION: Description of Artificial Sequence:cDNA for heavy

ORGANISM: Artificial Sequence

APPLICANT: LaMarche, Arthur
APPLICANT: Jelinek, Thomas
TITLE OF INVENTION: Recombinant Monoclonal Antibody Specific for
TITLE OF INVENTION: Phosphotyrosine-Containing Proteins

Sequence 3, Application US/09653755A GENERAL INFORMATION:

IS-09-653-755A-3

APPLICANT: Eisinger, Dominic P. APPLICANT: Stiles, Lynn

CURRENT APPLICATION NUMBER: US/09/653,755A

FILE REFERENCE: 724650-3

CURRENT FILING DATE: 2000-09-01 NUMBER OF SEQ ID NOS: 12

SOFTWARE: Patentin Ver. 2.1 SEQ ID NO 3

1389

TYPE: DNA

SULT 3

SEC ID NO 1 TYPE: DNA

No. is the number of results predicted by chance to have score greater than or equal to the score of the result being I and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
